

```
int swVar = 1;
int s, i;

while (swVar != 0) {
    switch (swVar) {
        case 1: {
            i = 1;
            s = 0;
            swVar = 2;
            break;
        }
        case 2: {
            if (i <= 100)
                swVar = 3;
            else
                swVar = 0;
            break;
        }
        case 3: {
            s += i;
            i++;
            swVar = 2;
            break;
        }
    }
}
```
